

REST API Reference Guide

1. Overview

This document provides reference for the RESTful API endpoints available in the core platform. The API uses JSON for requests and responses.

2. Authentication

All API requests require a Bearer token in the Authorization header: 'Authorization: Bearer <your_token>'. Tokens expire after 1 hour.

3. Users Endpoint

GET /api/v1/users - Retrieves a list of users. Supports pagination via ?page and ?limit parameters.

POST /api/v1/users - Creates a new user profile. Requires 'email', 'first_name', and 'last_name' in the JSON body.

4. Error Handling

The API returns standard HTTP status codes. 400 for bad requests, 401 for unauthorized, 403 for forbidden, and 500 for internal server errors. Error responses include a 'message' field with details.
